Drug-induced Sialadenitis is a frequent reason for consultation. It is easier to distinguish a drug-induced sialadenitis from a carcinoma of the salivary gland. Adverse drug reactions of the salivary glands are numerous, there is the possibility of drug-induced sialadenitis. A correct diagnosis requires the use of clinical and instrumental examinations. The choice of treatment remains difficult. The results of therapeutic management are often disappointing.Girl On Fire (song) "Girl On Fire" is a song by Norwegian singer Alexander Rybak. Written and produced by Christian Mele and Holger Peterson, it was released on 5 April 2013 as the lead single from Rybak's debut studio album The Way It Is. Neurons and their membrane channels mediate information processing and affect behavior in animals. Neurons express various types of ion channels, including TRP channels, which are gated by multiple different stimuli and have diverse functions in many tissues and cells. Here, we investigated the regulation of TRP1, a founding member of the TRP channel family in *Drosophila*, in different contexts. We established that TRP1 function is widely controlled by its C-terminal domain, which consists of a series of repeated Zn<sup>2+</sup>-binding motifs and a C-terminal TRP box domain. We show that the distribution of TRP1 channels in the plasma membrane is correlated with their expression levels and stimulated by the direct binding of intracellular polysomes with the TRP box domain. Moreover, expression of TRP1 is not altered by changing either the number or the availability of the TRP channel regulator, kinases, phosphatases, or by regulating the concentration of intracellular calcium. In contrast, TRP1 expression is acutely regulated by extracellular signals, such as direct binding of signaling ligands or activated G-protein-coupled receptors, which immediately modulate the channel's open probability. Our results indicate that TRP1 is subjected to a novel type of post-transcriptional control, in addition to transcriptional and post-translational control. This rheostat-like regulation of TRP1 by environmental and intracellular signals offers a unique way of fine-tuning ion channel function for the development and function of neurons. Inspired by the Lindbergh baby kidnapper, The Engleman has devised a plan to abduct the beloved art teacher, Mrs. McCaffrey, and his highly-valued animal set. Helped by the trusty co-conspirator Mrs. Leslie, the Englemans think they will be able to raise enough money to ransom Mrs. McCaffrey in exchange for their father's liberty. Mrs. Leslie, the mastermind behind the scheme, gathers up all the jewels and
